Markus Schiller : Characterizing the North Korean Nuclear Missile Threat (Technical Report) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Characterizing the North Korean Nuclear Missile Threat (Technical Report):

The security community generally believes that North Korea has a relatively sophisticated guided ballistic missile program. This report questions this view and seeks to better characterize the North Korean missile threat. The author compares the available data on the North Korean missile program against five hypotheses about the program's origins, sophistication, and scale, highlighting inconsistencies.

From the Inside Flap Questions the current common view of the North Korean missile program and seeks to better characterize the North Korean missile threat by comparing the available data on the North Korea missile program against several possible hypotheses.
