Modelling the De Havilland Mosquito (Osprey Modelling)By Mike StillModelling the De Havilland Mosquito (Osprey Modelling)Roy Sutherland has made a career of excellent aviation research and products for the scale modeler, and this book continues the trend. While the book emphasizes Airfix and Tamiya kits of the Mosquito, the techniques and information are applicable to improving any Mosquito kit or scratchbuilding project. Even if you aren't a Mosquito enthusiast, the techniques and processes featured in Sutherland's work alone are well worth the book's price. I've had experience with Roy's resin detail products, and this book mirrors the scholarship and talent he has demonstrated in his other product lines. Recommended without reservation.0 of 0 people found the following review helpful. Five StarsBy jpaskilllovely book for modelers0 of 1 people found the

following review helpful. Wooden WonderBy Stanley P SteinI've always been interested in the "Wooden Wonder) since it came into service in early WW2. It was another DeHavilland great design that served in multiple task missions. A great machine in all theaters of the war, except due to its laminated wood construction, in its latter years of service in the tropics, unlike in Europe where it fared well in that climate, in the jungles of the Pacific, that climate took its toll on the Mosquito airframe.Nevertheless, the Mosquito made a strong impression upon the Axis.

First entering service in 1941 the legendary 'all-wooden' Mosquito was one of the best twin-engined aircraft of its size to see action in World War II. The addition of radar turned the Mosquito into the RAF's premier night fighter, and it achieved great success in the defence of Britain, with some 600 raiders and 600 V1 rockets falling to its guns between 1942 and 1945. The design's superb performance, and ability to escape interception by enemy fighters also made the Mosquito the ideal choice for the RAF's photographic reconnaissance force. This wide range of roles across multiple theatres and air forces are all reflected in the variety of kits built and colour schemes shown throughout this book.

“Overall, this is another fine addition to Osprey Publications growing line of Modelling Manuals, and although a specializes manual in itself, I feel that any modeler of any skill level will benefit from it's words and pictures, as the methods, tips, and techniques discussed will definitely help the hobbyist to make his subjects much more detailed and realistic. Definitely a good read, and very much recommended for your bookshelf.” ?Mark Smith, AeroScaleAbout the AuthorRoy Sutherland has been a professional model maker for the last 20 years, and his work has been seen in TV commercials and movies such as Star Wars: Episode II and Planet of the Apes. Roy is the creative force behind Cooper Details, a small company that has produced resin detail sets for model aircraft since 1990. Roy lives in Fremont, California, and is employed as a project manager for 21st Century Toys, where he oversees production of (not surprisingly) military aircraft and armour replicas. He lives in Fremont, California.
