Franklin Kestner : To the Last Man! Kulbes' Mongrels at the Chosin Reservoir, Korea 1950 before purchasing it in order to gage whether or not it would be worth my time, and all praised To the Last Man! Kulbes' Mongrels at the Chosin Reservoir, Korea 1950:

2 of 2 people found the following review helpful. Valuable glimpse into historyBy MACPFrank Kestner wrote an

interesting little book which centers on his experiences as a private in a US Army combat engineer company which was trapped near the Chosin Reservoir alongside the Marine Corps. Kestner, who eventually retired as a Major, describes his early hardscrabble life growing up in the South, and occasionally brings the reader back to this during his Korean War passages, but the preponderance of the story deals with Chosin. Kestner also was the main engineer involved in the rigging of the explosives which destroyed the docks at Hungnam, as seen in newsreels. This all is very important, since little has been written about the various army units involved at the Chosin Reservoir. Indeed this book actually refutes errors subsequently made in "Breakout" by Martin Russ, for example. Anyone interested in the Chosin Reservoir battles should read "To the Last Man" for a well-rounded view. 1 of 3 people found the following review helpful. Not worth reading. By Old Salt This book stinks. I was there on East Hill and was acquainted with the author. Don't waste your money as this is only a book written for self-aggrandizement.

The Battle of Chosin Reservoir was a decisive battle in the Korean War. It was a brutal 17 day battle in freezing weather.
